## About XTAR

XTAR is a trusted satellite operator with a singular mission: to provide secure, non-preemptible satellite communications exclusively to the government and military user.

Founded in 2001, XTAR was the first commercial satellite operator to provide services in the X-band frequency. Due to its unique position on the RF spectrum, X-band enjoys critical advantages such as high throughput, efficiencies with small antennas and a virtually weatherproof signal, making it the ideal frequency for today's government and military users.

XTAR is a privately owned US company backed by majority shareholder Loral Space & Communications of New York. XTAR also enjoys investment and support from minority shareholder Hisdesat Strategic Services SA. XTAR launched its fleet without government funding, employing its own technical and financial resources for a system that is reserved exclusively for the benefit of the government user.
